

Dental Health Month

February is National Pet Dental Health Month! We are celebrating by offering dental cleanings and extractions at 10% off, as well as a 10% discount on all dental products!

The AVMA reports 80% of dogs and 70% of cats have some degree of dental disease by the age of 3! If your pet has the typical signs of dental disease, which includes red gums, halitosis, and discolored teeth, then they may be due for a dental cleaning! Regular annual exams for our pets can be a very good way to stay ahead of dental disease and help slow down the progression by doing home care.

We take dental hygiene very seriously and include the hows and whys of dental care into our annual exams. When we think a dental cleaning is medically necessary we recommend pre anaesthetic lab work prior to the procedure as well as a thorough exam to make sure there aren't other underlying diseases. A dental cleaning, polishing and extractions are all done under a general anesthetic. We use only the safest anesthetic protocols and advance monitoring of all patients. We advise full mouth digital radiographs and will do cold laser therapy on inflamed gums to expedite the healing.
